Professional Summary

Foundational tech talent and aspiring Software & AI Engineer with a strong command of Data Structures, Algorithms, and scalable Full-Stack Development. Active competitive programmer adept at optimizing complex solutions under tight constraints. Experienced in developing robust web architectures (Python, Node.js, React) and integrating predictive machine learning models. Highly motivated to leverage AI and engineering capabilities in hyper-scale environments to build product-oriented solutions for millions of users.

Education

Bachelor of Engineering in Computer Science and Engineering 2024 – 2028
Kongu Engineering College

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Operating Systems, Computer Networks.

Technical Projects

Alumnex-Connect (Web Platform)

- Built and deployed a web-based networking portal facilitating student-alumni connections, featuring secure user authentication and API integrations.
- Managed cloud deployment and server hosting on Render.com, bridging local development architectures with live, product-ready environments.
- Ensured continuous integration through rigorous Git version control, branch management, and pull requests.

Urban Dust Pollution Predictor (AI & Machine Learning)

- Led a research-driven AI project analyzing leaf reflectance and biological traits to accurately predict and classify urban dust pollution levels.
- Engineered Python-based data processing pipelines and implemented machine learning models to handle complex environmental datasets.
- Applied deep learning concepts to extract actionable insights, demonstrating foundational AI engineering capabilities.

Smart Certificate Generation and Student Service Automation System

- Developed a full-stack automated workflow platform connecting a responsive frontend with robust Python backend APIs.
- Designed secure relational database schemas in PostgreSQL/MySQL and wrote optimized SQL queries to manage large-scale student data efficiently.
- Applied OOP principles to eliminate administrative bottlenecks, building a highly scalable, system-level technical solution.

Technical Skills

Languages & Problem Solving: Python, Java, JavaScript, C++, Competitive Programming (HackerRank, LeetCode), Data Structures & Algorithms (Arrays, Sliding Window, etc.).

Software Development (SDE): React.js, Node.js, HTML5/CSS3, Java Swing, Object-Oriented Programming, Clean Coding Practices.

AI, Data & Backend: Machine Learning, OpenCV, Data Analysis, Python Backend (FastAPI/Flask), PostgreSQL, MySQL, MongoDB, RESTful APIs.

Tools & Cloud: Git, GitHub, VS Code, Postman, Cloud Deployment (Render.com), Linux Environments.
